DESCRIPTORS: \*Concrete, \*Steam, Temperature,  
Heat treatment, Mechanical properties.

Investigations on the steam curing of high-strength con-  
cretes made of stiff mixes with low water/cement ratios  
and Portland cements of high marks enabled the follow-  
ing conclusions to be drawn. When subjecting concretes  
to hydrothermal treatment, mixes should be selected  
with maximum stiffness and capable of compaction with  
the available equipment. Steam curing of stiff mixes  
with w/c ratios less than 0.4 at 60° to 80°C is more
